Example of technical sheet

RTS PROVIDES

- ➔ Sales and Production management
- ➔ Accounting management
- ➔ Industrial accounting

SOFTWARE PLUSES

The program is able to monitor job orders, elaborate estimates and process a final balance. It transforms data into valuable information that can be utilized to actually improve the supervision and control of the entire production process.

Technical area

- The system's quick response time, provides customers with real time assistance, resulting in improved service and greater competitiveness.
- RTSv8 improves information flow within all company departments, thus allowing authorized staff to easily and quickly obtain essential and accurate data.
- RTSv8 can be integrated with other application modules (for instance, technical design SW for packaging) designed by other vendors and fully integrated with the system.

Budgeting Ability

- RTSv8 evaluates precisely and in real time production costs of every single box produced.
- Maintains updated customer files thus allowing for each customer to rapidly receive information regarding their orders, offers and payment status.
- Checks all product line-up prices on a regular basis.

Purchasing Related Functions

- Allow stock optimization (stock reduction and a decline in the amount of time raw materials remain in the warehouse).
- Offer all the necessary tools and information that will give an edge on competition as well as providing more advantageous purchasing conditions.
- Allow for diversified stock evaluation methods (FIFO, LIFO etc.).
- Make it possible to accurately determine the raw materials needed for every job order.

Quality Control

RTSv8 traces and recognises the materials used in the production of every job order.

Machine Loading Features

- Monitor production capacity and have production volumes scheduled always available.
- Give the customer reliable delivery dates.
- Pilot sales.
- Improve scheduling of work shifts.

Production planning/scheduling

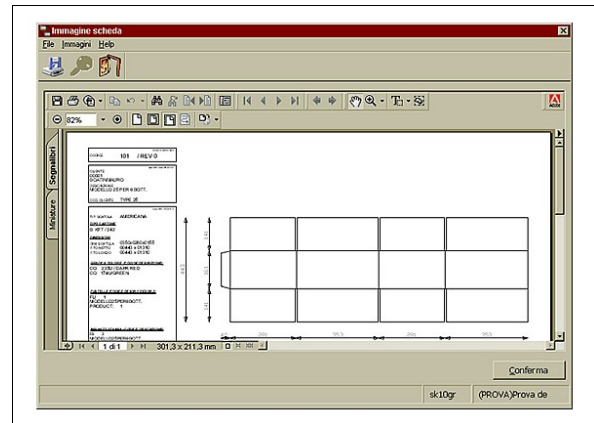

- Optimises production time thus avoiding logistics bottlenecks (roller conveyers, spaces, vehicles).
- Improves machine organization.
- Optimises warehouse logistics.
- Schedules "Just in time".

Management Control

- Identifies economic and production improvements.
- Keeps purchasing under control.
- Closely monitors the budgeting system by progressively tracking and comparing final results.
- Keeps production standards under control.

PLUSES

- ➔ We can say that RTSv8 improves:
- ➔ The whole business cycle. With RTSv8 all the activities are quickly processed, and your staff will have more time available to work on something else.
- ➔ Production. Identifying the problematical areas, the systems is able to actually help you to improve quality and efficiency within the company.
- ➔ Outside relationships. You can provide your customers with a high-quality service, and you have all the important tools to deal in a better way with providers.
- ➔ Management control. Receiving automatically from the system all the reports divided by business area and comparing the initial cost estimate with the final balance, the system identifies problems. In this way you can correct possible mistakes.
